JOINT PATIENT TRACKING APPLICATION (JPTA)

BACKGROUND
▶ Web-based patient tracking and management tool that collects, manages, analyzes and reports data on patients arriving at medical treatment facilities (MTFs) from forward deployed locations
▶ Developed at Landstuhl Regional Medical Center (LRMC)

FEATURES
▶ View patient movement information from the U.S. Transportation Command allowing users to view the number of evacuations of each theater, with the ability to drill down through the lines of service, the unit and the individual Soldier level
▶ Streamlines information about incoming and outgoing patients from MTFs

BENEFITS
▶ Ability to view real-time status of sick and injured troops — by name — as they move throughout forward deployed medical treatment facilities
▶ Improves medical staff's ability to anticipate and plan for the needs of incoming patients, as opposed to waiting until they arrive

USES
▶ Commanders and medical personnel use JPTA to track patients' whereabouts throughout the combat zone while maintaining an inventory database in the combat zone.

ADDITIONAL INFORMATION
▶ JPTA account registration form
